

Over 10,000 cameras injected in the IP network since 2000.

## bfi Server Enterprise

The servers have alarms for the following management functionalities geared towards the **operation of large-scale installations** or the **satisfaction of complex requirements**:

Programming of high-level **Macros/Scripts** as a response to an alarm/event.

**Redundancy** in the event of faults for recording, virtual matrix and data base.

**Integration with third-party manufacturers** (the same as the premium version) by way of SDK connection.

**Metadata** to enable forensic analysis.
